

## Level Fix<sup>®</sup> DATA SHEET

### Composition

Product based on special cements, selected aggregates and additives.

### Features and applications

- Indoor floor levelling.
- High mechanic resistance.
- High resistance to abrasion.
- Excellent levelling qualities.
- Rapid setting.
- Up to 10 mm thickness.

### Substrates

- Concrete, mortar flooring and similar elements.
- Substrates must be resistant, stable, sound and clean, free of dust, demolding agents, organic products, etc.
- With low-porosity substrates, apply a priming coat (TEXTURE FIX PLUS) or improve roughness by mechanical means.
- Before applying the paste, make sure that residual moisture is below the recommended proportion (less than 3%).
- Fill voids or holes.

### Instructions for use

- Add water (5.5 to 6 litres per bag) and mix with a low-speed mechanical mixer (500 rpm approx.) until you have an even and fluid paste.
- Let the mixture stand for 2 minutes and remix.
- The manipulation time of the paste is 20 minutes, depending on the weather conditions.
- Pour the mixed product on the base to be set and spread with a levelling trowel.
- The recommended thickness is 2 – 3 mm. applied in one coat.

### Packaging

25 Kg Hybrid Pro plastic-lined paper bag.
